Index of Feature Material

MATERIALS & METHODS

Volume 33

January—June 1951, Inclusive

Feature editorial matter from Volume 33 of MATERIALS & METHODS covering issues from January through June 1951 is indexed here. Material covered in the index includes feature articles, MATERIALS & METHODS Manuals, and Engineering File Facts.

Alloy Steel Prop Blades Made by Hot Extruding—May, p. 66

Alternates and Substitutes:

Alternate and Substitute Materials for Electrical Equipment and Parts (File Fact)—Mar., p. 107
Alternate Steels Useful as Substitutes for Critical Materials—Jan., p. 62
Ceramic Coatings Permit Substitutes for Critical Materials, Heat Resistant—Mar., p. 65
Powder Metallurgy Can Help Conserve Critical Metals—Feb., p. 134
Shell Rotating Bands Successfully Made from Iron Powders—Apr., p. 61
Steel Compositions to Conserve Critical Alloying Elements, New (File Fact)—Apr., pp. 105, 107
Substitute Grades Suggested for Scarce Stainless Steels—Mar., p. 87
Tin Plate Substitutes, Europe Studies—May, p. 132

Aluminum and Its Alloys:

Brazing in Salt Baths Offers Production Economies—Jan., p. 64
Characteristics and Applications of Standard Aluminum Rivet Alloys and Tempers (File Fact)—June, p. 105
Nickel-Aluminum Alloy Combines Strength and Corrosion Resistance—Apr., p. 73
Wrought Aluminum Alloys (MATERIALS & METHODS Manual)—June, p. 89
Zinc-Base and Aluminum-Base Die Castings, Preparing for Finishing—Mar., p. 68
Austenitic Stainless Steels (File Fact)—May, pp. 99, 101
Blackening Bath for Ferrous Metals, New—Jan., p. 128

Brazing (see Welding)

Brazing in Salt Baths Offers Production Economies—Jan., p. 64
Carbonitriding Produces Hard Case at Lower Temperature—May, p. 64
Case-Hardening Steel—Carburizing, Nitriding or Carbonitriding?, Which Process for—Feb., p. 62

Castings and Casting:

Nonferrous Alloys for Investment Castings, How to Select—Jan., p. 78
Repair Welding, Defective Iron Castings Saved by—June, p. 86
Steel Casting Design Improves Quality and Reduces Cost, Good—Feb., p. 68
Steel Precision Investment Castings, The Plus and Minus of—May, p. 88
Ceramic Coatings Permit Substitutes for Critical Materials, Heat Resistant—Mar., p. 65
Characteristics and Applications of Standard Aluminum Rivet Alloys and Tempers (File Fact)—June, p. 105

Cleaning and Finishing:

Cleaning and Finishing Stainless Steels (MATERIALS & METHODS Manual)—Apr., p. 93
Diamond Powder Abrasives, Uniform High Quality Finish Obtained with—Feb., p. 65
Zinc-Base and Aluminum-Base Die Castings, Preparing for Finishing—Mar., p. 68

Coatings and Finishes:

Blackening Bath for Ferrous Metals, New—Jan., p. 128
Ceramic Coatings Permit Substitutes for Critical Materials, Heat Resistant—Mar., p. 65
Engineering Materials in Ordnance Equipment—May, p. 59
Insulating Materials and Coatings Extend Electric Motor Life, New—Mar., p. 74
Metal Coatings Produced by Vacuum Method, Thin, Attractive—June, p. 71
Review of Materials Engineering Developments in 1950 (MATERIALS & METHODS Manual)—Jan., p. 85
Tin Plate Substitutes, Europe Studies—May, p. 132
Color-Match Welding Solves Musical Instrument Fabrication Problem—Mar., p. 82
Compression Molded Plastic Parts (MATERIALS & METHODS Manual)—May, p. 91
Compression Molded Reinforced Plastics Now Finding Industrial Applications—Feb., p. 60
Controlled Materials Plan, Questions and Answers on the—June p. 69

Copper, Brass and Bronze:

Brazing in Salt Baths Offers Production Economies—Jan., p. 64
Color-Match Welding Solves Musical Instrument Fabrication Problem—Mar., p. 82
Copper—Our Current and Future Needs and Supply—June, p. 61
Copper Paste Permits Brazing Economies, New—Feb., p. 79
Corrosion Resistant Cements Have Many New Applications, Improved—June, p. 81
Diamond Powder Abrasives, Uniform High Quality Finish Obtained with—Feb., p. 65

Engineering File Facts:

Alternate and Substitute Materials for Electrical Equipment and Parts—Mar., p. 107
Austenitic Stainless Steels—May, pp. 99, 101
Characteristics and Applications of Standard Aluminum Rivet Alloys and Tempers—June, p. 105
Nickel-Chromium-Molybdenum Steels—Mar., p. 105
Soldering and Brazing Materials—Jan., pp. 97, 99; Feb., pp. 97, 99
Steel Compositions to Conserve Critical Alloying Elements, New—Apr., pp. 105, 107
Thermal Conductivities of Various Materials vs Temperatures—June, p. 107
Engineering Materials in Ordnance Equipment—May, p. 59

Extrusions:

Alloy Steel Prop Blades Made by Hot Extruding—May, p. 66
Plastic Extrusions Cut Costs in Recent Applications—June, p. 74

Fabricated Forms and Parts:

Compression Molded Plastic Parts (MATERIALS & METHODS Manual)—May, p. 91
Compression Molded Reinforced Plastics Now Finding Industrial Applications—Feb., p. 60
Magnesium Housings, Saving Weight with—June, p. 78
Oil-Pocket Metal Powder Bearings Improve Self-Lubricating Qualities—May, p. 80
Powder Metallurgy Can Help Conserve Critical Metals—Feb., p. 134
Review of Materials Engineering Developments in 1950 (MATERIALS & METHODS Manual)—Jan., p. 85
Shell Rotating Bands Successfully Made from Iron Powders—Apr., p. 61
Stamped Electrical Circuits Yield Compact, Low Cost Assemblies—Apr., p. 78
Flame Hardening of Steel Cutters Reduces Warpage, Localized—Mar., p. 76

Forgings:

Testing and Inspection of Forgings Assures High Quality at Lower Cost, Intelligent—Mar., p. 77

Forming:

Stamped Electrical Circuits Yield Compact, Low Cost Assemblies—Apr., p. 78
Welded Narrow Steel Sheets Used for Wide Stampings—Jan., p. 83
Glass as an Engineering Material (MATERIALS & METHODS Manual)—Mar., p. 89

Heating and Heat Treatment:

Carbonitriding Produces Hard Case at Lower Temperature—May, p. 64
Case-Hardening Steel—Carburizing, Nitriding or Carbonitriding?, Which Process for—Feb., p. 62
Flame Hardening of Steel Cutters Reduces Warpage, Localized—Mar., p. 76
Liquid Flame Hardening Used to Selectively Harden Steel Gear Teeth—Jan., p. 74
Pearlitic Malleable Irons Can be Successfully Surface Hardened—Apr., p. 70
Hot Machining of Many Metals Improved by Arc Heating—Jan., p. 69
Insulating Materials and Coatings Extend Electrical Motor Life, New—Mar., p. 74

Irons:

Pearlitic Malleable Irons Can Be Successfully Surface Hardened—Apr., p. 70

Lead:

Lead Construction, New Developments Expand Use of—May, p. 69
Lead-Bearing Steel Improves Machinability—Feb., p. 142
Liquid Flame Hardening Used to Selectively Harden Steel Gear Teeth—Jan., p. 74

Machining and Machined Parts:

Hot Machining of Many Metals Improved by Arc Heating—Jan., p. 69
Lead-Bearing Steel Improves Machinability—Feb., p. 142

Magnesium:

Magnesium Housings, Saving Weight with—June, p. 78
Magnetic Particle Testing Technique Speeds Inspection of Ferrous Parts, New—June, p. 66

Manuals, Materials & Methods:

Cleaning and Finishing Stainless Steels—Apr., p. 93
Compression Molded Plastic Parts—May, p. 91
Glass as an Engineering Material—Mar., p. 89
Nondestructive Testing of Engineering Materials and Parts—Feb., p. 81
Review of Materials Engineering Developments in 1950—Jan., p. 85
Wrought Aluminum Alloys—June, p. 89
Metal Coatings Produced by Vacuum Method, Thin, Attractive—June, p. 71
Nickel-Aluminum Alloy Combines Strength and Corrosion Resistance—Apr., p. 73

Nickel and Its Alloys:

Nickel-Aluminum Alloy Combines Strength and Corrosion Resistance—Apr., p. 73
Nickel-Chromium-Molybdenum Steels (File Fact)—Mar., p. 105
Nondestructive Testing of Engineering Materials and Parts (MATERIALS & METHODS Manual)—Feb., p. 81

Nonferrous Metals:

Engineering Materials in Ordnance Equipment—May, p. 59
Nonferrous Alloys for Investment Castings, How to Select—Jan., p. 78
Progress in Industry Awaits Many Developments in Engineering Materials—Jan., p. 57
Review of Materials Engineering Developments in 1950 (MATERIALS & METHODS Manual)—Jan., p. 85

Nonmetallic Materials and Plastics:

Ceramic Coatings Permit Substitutes for Critical Materials, Heat Resistant—Mar., p. 65

Compression Molded Plastic Parts (MATERIALS & METHODS Manual)—May, p. 91
Compression Molded Reinforced Plastics Now Finding Industrial Applications—Feb., p. 60
Corrosion Resistant Cements Have Many New Applications, Improved—June, p. 81
Diamond Powder Abrasives, Uniform Quality Finish Obtained with—Feb., p. 65
Engineering Materials in Ordnance Equipment—May, p. 59
Glass as an Engineering Material (MATERIALS & METHODS Manual)—Mar., p. 89
Insulating Materials and Coatings Extend Electric Motor Life, New—Mar., p. 74
Plastics Can Be Joined by Several Welding Methods—Feb., p. 74
Plastic Extrusions Cut Costs in Recent Applications—June, p. 74
Progress in Industry Awaits Many Developments in Engineering Materials—Jan., p. 57
Property Values of Plastics, How to Interpret—Apr., p. 66
Review of Materials Engineering Developments in 1950 (MATERIALS & METHODS Manual)—Jan., p. 85
Rigid Vinyl Processed without Plasticizer, New—May, p. 74
Silicone Elastomer Retains Properties Over Wide Temperature Range, New—Jan., p. 67
Zirconia Refractory Material Useful at Temperatures to 4600 F, New—Mar., p. 81
Oil-Pocket Metal Powder Bearings Improve Self-Lubricating Qualities—May, p. 80
Pearlitic Malleable Irons Can Be Successfully Surface Hardened—Apr., p. 70
Photoelastic Stress Analysis Useful in Design of Metal Parts: Part 1—Two-Dimensional Method—Mar., p. 70; Part 2—Three-Dimensional Method—Apr., p. 89

Plastics (see Nonmetallic Materials)

Powder Metallurgy:

Oil-Pocket Metal Powder Bearings Improve Self-Lubricating Qualities—May, p. 80
Powder Metallurgy Can Help Conserve Critical Metals—Feb., p. 134
Shell Rotating Bands Successfully Made from Iron Powders—Apr., p. 61
Progress in Industry Awaits Many Developments in Engineering Materials—Jan., p. 57
Property Values of Plastics, How to Interpret—Apr., p. 66
Repair Welding, Defective Iron Castings Saved by—June, p. 86
Review of Materials Engineering Developments in 1950 (MATERIALS & METHODS Manual)—Jan., p. 85
Rigid Vinyl Processed without Placticizer, New—May, p. 74
Shell Rotating Bands Successfully Made from Iron Powders—Apr., p. 61
Silicone Elastomer Retains Properties Over Wide Temperature Range, New—Jan., p. 67
Silver Alloy Brazing a Versatile Joining Method—Apr., p. 82
Soldering and Brazing Materials (File Fact)—Jan., pp. 97, 99; Feb., pp. 97, 99

Spinnings and Spinning:

Spinning of Stainless Steel in Production, Automatic—May, p. 86
Stamped Electrical Circuits Yield Compact, Low Cost Assemblies—Apr., p. 78
Steel Casting Design Improves Quality and Reduces Cost, Good—Feb., p. 68

Steels:

Alloy Steel Prop Blades Made by Hot Extruding—May, p. 66
Alternate Steels Useful as Substitutes for Critical Materials—Jan., p. 62
Austenitic Stainless Steels (File Fact)—May, pp. 99, 101
Cleaning and Finishing Stainless Steels (MATERIALS & METHODS Manual)—Apr., p. 93
Engineering Materials in Ordnance Equipment—May, p. 59
Lead-Bearing Steel Improves Machinability—Feb., p. 142
Nickel-Chromium-Molybdenum Steels (File Fact)—Mar., p. 105
Review of Materials Engineering Developments in 1950 (MATERIALS & METHODS Manual)—Jan., p. 85
Steel Compositions to Conserve Critical Alloying Elements, New (File Fact)—Apr., pp. 105, 107
Steel Precision Investment Castings, The Plus and Minus of—May, p. 88
Substitute Grades Suggested for Scarce Stainless Steels—Mar., p. 87
Submerged Arc Welding, What You Can Do with—May, p. 82

Testing and Inspection:

Magnetic Particle Testing Technique Speeds Inspection of Ferrous Parts, New—June, p. 66
Nondestructive Testing ot Engineering Materials and Parts (MATERIALS & METHODS Manual)—Feb., p. 81
Photoelastic Stress Analysis Useful in Design of Metal Parts: Part 1—Two-Dimensional Method—Mar., p. 70; Part 2—Three-Dimensional Method—Apr., p. 89
Property Values of Plastics, How to Interpret—Apr., p. 66
Testing and Inspection of Forgings Assures High Quality at Lower Cost, Intelligent—Mar., p. 77
Thermal Conductivities of Various Materials vs Temperatures (File Fact)—June, p. 107

Tin:

Tin Plate Substitutes, Europe Studies—May, p. 132

Titanium and Zirconium:

Titanium Rapidly Growing as Useful Engineering Material—Feb., p. 57

Welding and Joining:

Brazing in Salt Baths Offers Production Economies—Jan., p. 64
Characteristics and Applications of Standard Aluminum Rivet Alloys and Tempers (File Fact)—June, p. 105
Color-Match Welding Solves Musical Instrument Fabrication Problem—Mar., p. 82
Copper Paste Permits Brazing Economies, New—Feb., p. 79
Plastics Can Be Joined by Several Welding Methods—Feb., p. 74
Repair Welding, Defective Iron Castings Saved by—June, p. 86
Review of Materials Engineering Developments in 1950 (MATERIALS & METHODS Manual)—Jan., p. 85
Silver Alloy Brazing a Versatile Joining Method—Apr., p. 82
Soldering and Brazing Materials (File Fact)—Jan., pp. 97, 99; Feb., pp. 97, 99
Submerged Arc Welding, What You Can Do with—May, p. 82
Welded Narrow Steel Sheets Used for Wide Stampings—Jan., p. 83
Wrought Aluminum Alloys (MATERIALS & METHODS Manual)—June, p. 89

Zinc:

Zinc-Base and Aluminum-Base Die Castings, Preparing for Finishing—Mar., p. 68
Zirconia Refractory Material Useful at Temperatures to 4600 F, New—Mar., p. 81

Authors' Index

Alexander, A. P., Flame Hardening of Steel Cutters Reduces Warpage, Localized—Mar., p. 76
Armstrong, E. T. & Cosler, A. S., Hot Machining of Many Metals Improved by Arc Heating—Jan., p. 69
Bennett, Dwight G., Ceramic Coatings Permit Substitutes for Critical Materials, Heat Resistant—Mar., p. 65
Briggs, Charles W., Steel Casting Design Improves Quality and Reduces Cost, Good—Feb., p. 68
Bush, S. H., Rote, F. B. & Wood, W. P., Pearlitic Malleable Irons Can Be Successully Surface Hardened—Apr., p. 70
Cady, Edwin L., Alternate Steels Useful as Substitutes for Critical Materials—Jan., p. 62
Campbell, John B., Brazing in Salt Baths Offers Production Economies—Jan., p. 64
Cass, W. G., Tin Plate Substitutes, Europe Studies—May, p. 132
